exe for Adobe Photoshop How to run/install Adobe's Illustrator cs6 and Photoshop and Flash and InDesign on Ubuntu? closed Ask Question Asked 7 years ago.. You'll also have a deb file in your current folder if you need to use it on another machine.. This tutorial is Jaunty only (it might work on others, but I doubt it) Programs you'll need Before we start, get some generic compiling stuff: Get rid of Wine You want to remove your current Wine install: Compiling Wine First off, add the Wine PPA to your sources: Add its key and update: Now we need to grab some dependencies and the source: Move into the wine folder: Download the patch to make the installer work (This bug): Apply the patch: Compile: Note: if you have multiple processors, add -j(number_of_processors+1) to each make the command.. For my 4 core system I used: /configure && make -j5 depend && make -j5 Install (this will install Wine as a package): You should now have the latest version of Wine patched and installed.. Right click on the AdobePhotoshopSetUp exe or type the following command in terminal after navigating to the place where you have kept the setup. [Candyland Computer Game Download Mac](#)
